

Sample API project

Task management APIs. Implement the CRUD operations for tasks.

Task has a title and description.

API	Functionality
Post /tasks	Create task
Get /tasks	Get list of available tasks
Get /task/:id	Get the task with the given id
Put /tasks/:id	Edit task
Delete /task/:id	Delete tasks

Instructions

1. Use node express to implement the above APIs.
2. Return proper responses with the status codes
3. Use middleware to validate requests.
4. Keep the objects in memory. No need to save in the database.
